M: Our island's power supply has changed twice. Forty years ago almost everything ran on imported fuel, which made electricity costly whenever world prices rose. Then a nuclear plant was built, and prices steadied for a generation. That plant closed last year, and the gap has been filled mostly by natural gas, with wind and solar growing quickly but from a small base. The lesson for planners is that no source stays cheap forever.

我們島上的供電變過兩次。四十年前幾乎全靠進口燃料，只要國際價格上漲，電費就昂貴。後來蓋了一座核電廠，電價穩定了一個世代。那座電廠去年關閉，缺口主要由天然氣填補，風力與太陽能成長很快，但基數小。給規劃者的教訓是：沒有任何能源會永遠便宜。

Material Comparison

Material	Weight	Cost	Strength
Aluminium	Light	Medium	Good
Copper	Heavy	High	Good
Steel	Heavy	Low	Best
Plastic	Lightest	Lowest	Poor

W: Please look at the printed comparison of four materials while I speak. Notice that the lightest of the four is not the cheapest, and the strongest is not the heaviest. We choose aluminium for the frame because weight matters more than price here. Copper would conduct better, but it costs three times as much and would double the weight. Plastic is out of the question for parts that get hot, however cheap it is.

我說明時請看印出的四種材料比較表。請注意四者中最輕的不是最便宜的，最強的也不是最重的。我們選鋁做框架，因為在這裡重量比價格更重要。銅導電更好，但價格是三倍，重量也會加倍。至於會發熱的零件，塑膠再便宜也絕對不能用。
