第 4 部分 簡短談話 Short Talks

M: Before you enter the laboratory, listen to these rules. Eye protection must be worn at all times, even when you are only watching. Long hair must be tied back, and bags go under the bench, never in the aisle. If you spill any liquid, do not wipe it yourself; tell a teacher, who will decide what to use. At the end, wash your hands before you touch your phone, not after. Most accidents here happen in the last five minutes, when people hurry.

進入實驗室前請聽這些規定。護目裝備必須全程配戴，即使你只是在旁邊看。長髮必須綁起來，背包放在實驗桌下，絕不要放在走道。若打翻任何液體，不要自己擦；告訴老師，由老師決定用什麼處理。結束時請先洗手再碰手機，不要反過來。這裡多數意外發生在最後五分鐘，也就是大家趕時間的時候。

W: I want to explain why one experiment is never enough. A single result can look convincing and still be wrong, because chance alone produces surprising numbers now and then. That is why we repeat the work, and why other laboratories repeat it too. If a result cannot be produced twice, it is not evidence; it is a story. A good scientist is therefore less interested in a striking finding than in a finding that keeps coming back.

我想說明為什麼一次實驗永遠不夠。單一結果看起來可能很有說服力卻仍然是錯的，因為光靠機率偶爾就會產生令人驚訝的數字。這就是我們要重複實驗、也要讓其他實驗室重複的原因。若一個結果無法被做出第二次，它就不是證據，而是故事。因此好的科學家對驚人的發現不那麼感興趣，反而更在意一再重現的發現。

29. Why can a single result be wrong? 答案 B

- A. The equipment is old. 設備老舊。

- C. A famous name. 名氣。
- D. A fast result. 快速的結果。

詳解 | a finding that keeps coming back。scientific 是主題字。

M: The story of this invention is not what people expect. The chemist who is remembered for it was not the first to make the substance; a physicist had produced a little of it eight years earlier but saw no use for it and wrote three lines about it in a journal. What the chemist did was to devise a cheap way of making it in quantity. The lesson is that in science, being first and being useful are often two different achievements.

這項发明的故事和大家想的不一樣。因它而被記住的那位化學家並不是第一個做出這種物質的人；一位物理學家在八年前就製造過少量，但看不出用途，只在期刊上寫了三行。那位化學家做的，是想出一種便宜的大量製造方法。教訓是：在科學裡，率先做到與做得有用，往往是兩種不同的成就。

Results – Gas Produced

Sample	Temperature	Time to react	Gas
A (control)	20°C	–	None
B	40°C	12 min	18 ml
C	50°C	6 min	34 ml
D	70°C	9 min	11 ml

W: Please look at the printed results table while I explain what we found. Notice that the highest temperature did not give the fastest reaction; sample C, at the middle temperature, was quickest. Sample D was heated most but produced the least gas, which suggests something breaks down above sixty degrees. Sample A is our control and should be ignored when you compare speeds. We will repeat the whole set next week before drawing any firm conclusion.

我說明結果時請看印出的表格。請注意最高溫並沒有帶來最快的反應；中溫的樣本 C 最快。樣本 D 加熱最多，產生的氣體卻最少，這顯示某種物質在六十度以上會分解。樣本 A 是對照組，比較速度時應予忽略。下週我們會重做整組實驗，之後才下確定結論。

35. According to the table and the talk, which sample reacted fastest? **答案 C**

根據表格與談話，哪個樣本反應最快？
